RESEARCH FOCUS

Generative models of multi-level human mobility (individual, household, population): diffusion, LLMs, constrained generation.

EDUCATION

University of California, Los Angeles, Ph.D. in Civil Engineering (Transportation) — Sep. 2025 – Present
National University of Singapore, Master of Computing in Computer Science (CAP: 4.15/5) — Jan. 2022 – Jul. 2023
Nanjing University, B.Eng. in Industrial Engineering (GPA: 4.36/5) — Sep. 2017 – Jul. 2021

RESEARCH EXPERIENCE

UCLA Mobility Lab, Graduate Student Researcher (Advisor: Prof. Jiaqi Ma) — Sep. 2025 – Present

- **Diffusion model for whole-day activity generation**: Designed a conditional diffusion model with a Transformer denoiser that jointly generates *location* × *activity* × *time* for a full day (5,697 zones × 15 activities × 96 time slots); trained on 8.1M GPS-derived person-days from 618K individuals in Los Angeles County.
- Beat 8 generative baselines (incl. MIRAGE, TrajGPT, MoveSim, ActVAE, TimeGeo) on 5 of 6 held-out realism metrics, reducing activity-duration and chain-structure divergence by 45% and 44% vs. the strongest baseline.
- **Constrained generation**: Developed maximum-entropy guidance that adapts the generator to a new target year from published aggregate totals alone, matching fine-tuning on individual-level data on the constrained statistics and cutting distance error in unseen regions from 14.1 to 1.1 km. Ongoing: counterfactual generation for large-event scenarios.
- **Trip purpose inference [1], co-first author**: Proposed a weakly supervised, uncertainty-aware framework that combines POI semantic zones with Pareto calibration to travel-survey statistics, reducing activity-type, start-time, and duration divergence by 23%, 48%, and 12% on 81M GPS staypoints.
- **LLM-to-CVAE mobility generation [3]**: Led population synthesis (households reconstructed from census aggregates) and location assignment for PopTraj, which distills an LLM teacher into a CVAE to generate 395K household-coordinated person-weeks in Tokyo (39% lower divergence than the best of 9 baselines).
- **Tourist mobility [2]**: Contributed to LLM-based activity-chain generation conditioned on seasonal spatial priors.

MIT-NEU-UF Research Program, Advisors: Prof. Jinhua Zhao & Dr. Yuebing Liang — May 2024 – Jun. 2025

- **Deep RL for urban planning [4], first author**: Formulated transit-oriented development planning as sequential decision-making with a combinatorial action space (land use × floor-area ratio) and a multi-objective reward; improved spatial efficiency by 70% and 54% over rule-based and optimization baselines.

NUS Master's Capstone, vision-language pipeline for dashcam driving-style profiling — Feb. 2023 – May 2023
NJU Undergraduate Thesis, deep RL with a Transformer policy for TSP local search — Jan. 2021 – Jun. 2021

ADDITIONAL EXPERIENCE

Temasek Labs @ NUS, Graduate Researcher: ANN vector search for radar-signal retrieval — Jun. 2022 – Sep. 2022
NUS Smart Medical Tech Lab, Research Intern: vision-based vital-signs detection — Sep. 2021 – Dec. 2021

SERVICE & SKILLS

Service: Editorial Coordinator, IEEE Open Journal of ITS (OJ-ITS); Student Committee Member, IEEE ITSS TC on Trustworthy AI
ML: Diffusion models, VAEs/CVAEs, Transformers, LLM prompting and distillation, deep RL, constrained/guided generation
Programming: Python, PyTorch, SQL; also TensorFlow, MATLAB, R, Java, C
